

# O<sub>3</sub> Bact

Cabinet for sanitation of helmets,  
suits and Motomotive accessories  
(and not only...)

**Dry, Fast, Cheap and mostly  
antibacterial!**

**Definition of Sanitation:** Cleaning of objects, specifically those wearables, with the aim of making them safe and attractive.

**The aim** of this system is to break down, up to a minimum level, the bacteria present in the environment, by contact and dirt, eliminating the cause of respiratory tract irritation, inflammation of skin and bad smells.

The particular conformation of these accessories makes it impossible to use traditional sanitizers, ozone (O<sub>3</sub>, allotropic state of oxygen) is an **effective alternative** for its high capacity to sanitize and disinfect. Ozone is a natural gas that leaves no trace or chemical residue and is visually colorless.

## Technical features:

Cabinet Volume : ca. 0.5 m<sup>3</sup>

Concentration O<sub>3</sub>: up to 25ppm / '

Exposure Time: from 2 'to 10' (adjustable)

Killing bacteria: > 80% \*

\*: Depending on initial UFC
